Rotaract Club of Xiamen University Malaysia

Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. TEAM AND PROJECT OVERVIEW

Team Name

KMJDIHATIKU

Project / Solution Name

BijakMatch (ReRole Green)

Name (Leader)

Chong Poh Yi

Email & Phone (Leader)

University Affiliation(s)

University Malaya

Live Prototype URL

https://bijakmatch.vercel.app

Code Repository URL (public / access granted to judges)

https://github.com/Pohyi118/BIJAKMATCH-

2. ARCHITECTURE & TECHNOLOGY STACK

2.1. System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

The browser app (HTML, CSS and plain JavaScript, hosted on Vercel) keeps the worker's profile and runs the rule engine locally, so scoring, ranking and scheduling are deterministic. It calls a Node.js API for AI tasks. /api/interview sends the shift-interview turns to Claude Opus 5.5 (or GLM-5.3 on RunPod when no Anthropic key is set); the reply is schema-checked and snapped to NOSS task cards. /api/transcribe sends audio to a RunPod Serverless GPU running Whisper large-v3. /api/market asks Claude, with web search, for a sourced state market report. /api/livekit/token starts a LiveKit Cloud voice skill check run by a separate agent. /api/cert/verify matches certificates to a whitelist with our own rules (no AI). A task-card classifier (xlm-roberta-base) was fine-tuned on a RunPod Pod. AI-trend and labour data are versioned snapshots (Anthropic Economic Index, ILO, OpenDOSM, MyMAHIR, HRD Corp). The output is a Stay / Evolve / Pivot comparison, a weekly study calendar and a Career Transition Card. If an API key is missing or a service fails, the server returns an offline fallback.

2. ARCHITECTURE & TECHNOLOGY STACK

2.2. Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
JavaScript (ES2023); Node.js 24	Front end and backend server	MIT (Node.js)
@anthropic-ai/sdk 1.1.0	Calls Claude (interview, market report)	Apache-2.0
livekit-server-sdk 2.19.2; @livekit/agents 1.9 + Anthropic plugin	Voice-call tokens and the live skill-check agent	Apache-2.0
zod 4.6.7	Schema validation of AI output	MIT
Python 3 with faster-whisper, transformers, torch	RunPod Whisper handler and classifier training	MIT; Apache-2.0; BSD-3-Clause
GSAP 3.12.5; Motion 11.11.13 (CDN)	User-interface animation (user-triggered only)	GSAP Standard licence; MIT

3. APIs & CLOUD SERVICES

3.1. External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API and Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Anthropic Messages API (Claude Opus 5.5) with web search tool	Shift interview; sourced state market report	Paid (team's own key)
RunPod public endpoint, GLM-5.3 (OpenAI-compatible)	Interview when no Anthropic key is set	Sponsor-provided (RunPod credits)
RunPod Serverless API (Whisper large-v3)	Speech-to-text, Bahasa Malaysia and English	Sponsor-provided (RunPod credits)
LiveKit Cloud (rooms, agent dispatch, LiveKit Inference)	Real-time voice skill check	Free (Build plan)
Google Fonts; jsDelivr and cdnjs (CDN)	Fonts and UI libraries	Free

3. APIs & CLOUD SERVICES

3.2. Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Vercel (static hosting)	Hosts the web app at bijakmatch.vercel.app	Hobby (free); region set automatically
RunPod Serverless	GPU endpoint for Whisper speech-to-text	Sponsor credits; region set automatically
RunPod GPU Pod	Fine-tuning the task-card classifier	Sponsor credits; region set automatically
LiveKit Cloud	Voice rooms for the live skill check	Free (Build plan)
GitHub	Source code repository	Free
Replit	Development environment only (not used for hosting)	Development use only

4. AI TOOLS, MODELS & DATASETS

4.1. AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Claude Opus 5.5 (claude-opus-5-5)	Anthropic API	pre-trained	Anthropic commercial terms
GLM-5.3	RunPod public endpoint	pre-trained	RunPod and model-publisher terms
Whisper large-v3 (faster-whisper)	OpenAI weights via Hugging Face	pre-trained	MIT
xlm-roberta-base task-card classifier	Meta AI base model; fine-tuned by our team on RunPod	fine-tuned	MIT
Claude Opus 4.8 (voice agent) with LiveKit Inference: Deepgram nova-3 (STT), Cartesia sonic-3.5 (TTS)	Anthropic; LiveKit Inference	pre-trained	Provider terms

4. AI TOOLS, MODELS & DATASETS

4.2. Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Anthropic Economic Index	huggingface.co/datasets/Anthropic/EconomicIndex	public	CC-BY-4.0	N
ILO Generative AI and Jobs index	ilo.org (Refined Global Index)	public	ILO terms of use	N
OpenDOSM labour statistics	open.dosm.gov.my	public	OpenDOSM open data licence	N
MyMAHIR, MGTC Green Jobs and HRD Corp course snapshots	Public portals, recorded by hand with date; some demo values labelled Sample	public / self-collected	Site terms	N
NOSS task cards (JPK)	Compiled from JPK NOSS competencies	self-collected	Public standard, attributed	N
Sample worker profiles and 85 labelled interview lines (67 train, 18 validation)	Written by our team (runpod/train/data)	synthetic	Own work	N

4. AI TOOLS, MODELS & DATASETS

4.3. AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	Used For	Extent of Use (minor / moderate / major)
Claude Code (Claude Opus 5.5 / Sonnet 5.5)	Code, tests, documentation, pitch deck and demo video	major
ChatGPT / Codex	Ideas and text	minor
Gemini	Code help	minor

4. AI TOOLS, MODELS & DATASETS

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

A team member read every AI-generated change before keeping it. We ran the automated tests (npm test: scoring, RunPod client and backend end to end), launched the app in a browser, and checked screenshots and the demo tour by eye. Numbers written with AI help were traced to a source or removed. Scoring is rule-based, so an AI tool never decides a result. The team leader takes responsibility for everything submitted.

5. SPONSOR-PROVIDED RESOURCES

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	Resource (API / credits / platform / data)	How It Was Used in the Project
RunPod	GLM-5.3 public endpoint; Serverless GPU endpoint; GPU Pod (credits)	Interview fallback; Whisper speech-to-text; fine-tuning the task-card classifier
Replit	Replit development environment	Writing and running code during development; not used for hosting

5. SPONSOR-PROVIDED RESOURCES

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

No, it is not essential. RunPod improves the prototype but the core flow works without it. Scoring, ranking and the calendar run in the browser with no sponsor resource. The interview can use Claude (our own key) instead of GLM-5.3, and falls back to an offline interviewer. Speech-to-text is optional because workers can type their answers. Without the sponsor GPU we would lose voice input in Bahasa Malaysia and the retrained task-card classifier, not the main features.

6. SECURITY, PRIVACY & RESPONSIBLE USE

6.1. Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The worker's profile (job, state, weekly hours, budget, certificates, skills and interview answers) is stored in the user's own browser. Only the data needed for an AI step is sent to our Node API and on to the provider: interview text, optional audio, photos or video frames, and the state and job for a market report. API keys stay on the server and are never in the browser, the repository or this document. Our server does not write user data to a database or file. Providers (Anthropic, RunPod, LiveKit) keep data under their own terms. The demo uses synthetic sample workers and SAMPLE certificate images, and no real personal data. Age, gender and background are never used in scoring. Browser data is kept until the user clears it, and we keep nothing server-side.

6. SECURITY, PRIVACY & RESPONSIBLE USE

6.2. Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

Language models can invent or misread, so interview answers must map to a fixed list of NOSS task cards or are marked unclassified, and every output is schema-checked. Scoring uses fixed rules, not a model. We depend on single providers, so each AI feature has a fallback: Claude, then GLM-5.3, then an offline interviewer. Market and AI-trend data are dated snapshots, and some demo values are samples labelled in the interface; training-supply data is scarce, so confidence is shown. Market crowding is displayed next to the score but is not yet part of it. The prototype covers one sample worker and one job slice. Vercel limits request size, so very large video uploads may fail. Speech recognition can be less accurate for strong accents or noise; typed answers are always possible.

7. COMPLIANCE & READINESS

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. DECLARATION

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
